Education

University of Utah

Fall 2025 - Spring 2029

Bachelor of Science in Mechanical Engineering – Cumulative GPA: 3.40

Emphasis in Robotics & Controls, Minor in Computer Science

- Dean's List Recipient | Fall 2025 | GPA: 4.00
- Research Interests: Medical Robotics, Machine Learning, Control Systems

Skills

Technical Skills - SolidWorks, AutoCAD, Git/GitHub, Cura, Bambu Studio

Programming Languages - MATLAB, C++, JavaScript, HTML/CSS

Certifications - Certified SolidWorks Associate (Mechanical Design) – Associate Level

Interpersonal Skills – Leadership in Team-Based Environments, Conflict Resolution, Attention to Detail

Projects

Single-Axis Linear Actuator & Trajectory Control System

August 2025 - December 2025

- Optimized C++ firmware by implementing non-blocking asynchronous timers, enabling parallel operation of the linear actuator and reloading mechanisms.
- Applied inverse kinematics in MATLAB to calculate precise servo angles for an automated cannon, evaluating the system's maximum and minimum effective ranges.
- Developed a state estimation protocol combining mechanical wall-calibration with an IR sensor on a high contrast rail to continuously track the robot's real-time position.
- Established serial communication between an Arduino microcontroller and MATLAB to relay coordinate data, ensuring accurate automated alignment and firing.

Submersible Water Pump

January 2026 - April 2026

- Designed and developed a 3D-printable centrifugal water pump in a 3-person team, integrating a 3W motor under strict material constraints.
- Applied GD&T principles to the impeller and multi-part casing to eliminate pressure dead zones, minimize internal friction, and prevent axis whip during operation.
- Conducted rapid prototyping by evaluating 3 physical iterations within 2 weeks, scaling the impeller by 250% to maximize fluid displacement.
- Leveraged SolidWorks to optimize wet performance, achieving a consistent 2.5 GPM flow rate that surpassed the 1 GPM project goal.

Personal Portfolio Website

March 2026 – May 2026

- Developed a responsive personal web application using JavaScript and HTML to showcase engineering projects, CAD designs, and software capabilities.
- Deployed the live site utilizing GitHub Pages for reliable hosting, managing source code, and continuous updates through Git version control.

Work Experience

HGN Lab for Bionic Engineering

May 2026 - Present

Undergraduate Research Assistant

- Fabricated custom mechanical components for bionic device prototypes utilizing advanced CNC machinery.
- Engineered closed-loop motor control systems utilizing specialized encoders for precise robotic actuation.

Murray City School District

July 2022 - June 2025

Cybercorp IT Intern

- Diagnosed and repaired hardware issues on student Chromebooks, including replacing faulty logic board transistors and damaged displays.
- Utilized ServiceNow and Excel databases to manage and resolve IT helpdesk tickets for a large student and faculty population.
- Deployed and configured projection systems, ensuring seamless technological integration into classrooms to maximize effective instructional time.
